Dear Lawmakers,

Please allow Microsoft to go on with building the nations economy. Microsoft has done the public a GREAT SERVICE by standardizing the method in which we use software. Through the Windows format we are able to add numerous software programs without the added cost and memory space of having multiple foundation systems for the software to run on. This has simplified the process for the software developers as well by enabling them to build onto windows rather than including bulky basis data with every program.

Some reform may be deemed necessary, but let's work it out and get the forward progress of this great nation back on it's feet again...ASAP.

Thank You for your consideration,  
J Pellegrini and C Pellegrini
